

Firm Frequency Response

Market Information for Tenders for November 2005

National Grid publishes this information, in order to inform potential participants for the Firm Frequency Response tender round for November 2005.

Total Frequency Response Requirements

Our indicative daily Total Requirement for Frequency Response in November is shown on a Settlement Period basis for weekdays, in Figure 1 and for Saturdays, Sundays and Bank Holidays, in Figure 2. The graphs show the requirement at maximum frequency deviation: 0.8 Hz for Primary and 0.5 Hz for Secondary and High Response.

Figure 1

Figure 2

Minimum Dynamic Response Requirement

The indicative minimum required levels for Dynamic response are shown for Weekdays, Figure 3 and Saturdays, Sundays and Bank Holidays, Figure 4. The levels are shown for delivery at 0.5 Hz deviation, although 0.2 Hz is the largest frequency deviation within normal operational range. The total amount of response delivered by Dynamic providers contributes to meeting the Total Response Requirement, Figures 1 and 2, above.

Indicative Minimum Dynamic Response Requirement - Weekday

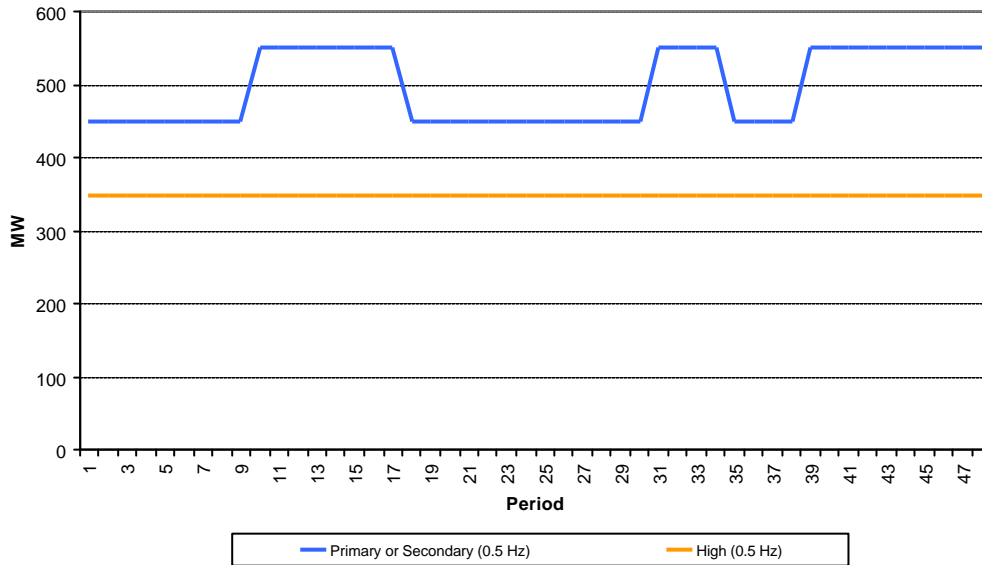

Figure 3

Indicative Minimum Dynamic Response Requirement - Weekend

Figure 4

Maximum Non-Dynamic Response Level

The expected maximum level of Non-Dynamic Response is shown below for Weekdays, Figure 5, and for Saturdays, Sundays and Bank Holidays, Figure 6.

Figure 5

Figure 6

The maximum level of Non-Dynamic Response achievable is the Total Response Requirement (at 0.5 and 0.8Hz) less the Minimum Dynamic Response Requirement delivery (at 0.5 and 0.8Hz as appropriate).

Balancing Mechanism instructions on Frequency Responsive plant

Figure 7, below, shows a post-event analysis of the volume of Bid Offer Acceptances instructed on Balancing Mechanism Units that were, in conjunction with the delivery of the BOA energy, also providing Frequency Response. This analysis covers July 2005 (1st to 31st) and August 2005 (1st to 31st) on a daily basis. This data gives an indication of periods during which National Grid takes balancing actions which also contribute to the optimisation of the response holding across the system. However, readers should be aware that this is only indicative and actions may have been required for other reasons apart from (or as well as) Frequency Response optimisation (such as resolving energy imbalance or transmission system constraints).

Figure 7

Figure 8 represents this data on a settlement period basis.

Figure 8

The total volumes for Frequency Response holding on Mandatory service providers of **1,428 GWh** for July and **1,352 GWh** for August break down into price bands as follows:

JULY	Primary	Secondary	High
Price band (£/MWh/h range)	Volume (MWh)	Volume (MWh)	Volume (MWh)
Greater than 2	427,101	301,879	26,062
1.5 to 2	3,277	137	0
1 to 1.5	218	4,245	33,980
0.5 to 1	0	4,112	468,495
0 to 0.5	0	10,115	148,093
Totals	430.6 GWh	320.5 GWh	676.6 GWh
Costs	£1.14 m	£0.90 m	£0.48 m
Total Frequency Response Holding Volume			1,428 GWh
Total Frequency Response Holding Cost			2.52 £m

AUGUST	Primary	Secondary	High
Price band (£/MWh/h range)	Volume (MWh)	Volume (MWh)	Volume (MWh)
Greater than 2	413,967	280,833	21,731
1.5 to 2	2,017	103	0
1 to 1.5	81	4,223	44,260
0.5 to 1	0	3,648	468,676
0 to 0.5	0	7,890	104,815
Totals	416.1 GWh	296.7 GWh	639.5 GWh
Costs	£1.10 m	£0.82 m	£0.47 m
Total Frequency Response Holding Volume			1,352 GWh
Total Frequency Response Holding Cost			2.39 £m

The above charts and tables show that from July to August overall Frequency Response holding volumes decreases by ~5% leading to an decrease in costs of ~5%. Please note that the MW/h units of payment are defined in the CUSC and do not relate to the units of 0.8Hz Primary and 0.5 Hz Secondary and High Response as quoted for the requirements, above.

For November 2005, Frequency Response Requirements are anticipated to be in line with the forecast figures 1 – 6, above. The availability of response services on optional contracts and on part loaded units means that it is unlikely that National Grid will seek to procure the entirety of its forecast requirement through this tender round. However, National Grid will procure in line with the principles laid out in the [Assessment Principles \[Hyperlink\]](#).

For the month of **November** tenders from eligible Service Providers for Firm Frequency Response should be submitted by 7th October 2005. National Grid will notify Service Providers of the outcome of the tender assessment by 18th October 2005. For successful tenders, National Grid will notify nominated windows, following assessment, by the 20th October 2005.

Tenders should be sent for the attention of:

Bea Ennim
Operations & Trading
National Grid plc
NGT House
Warwick Technology Park
Gallows Hill
Warwick
CV34 6DA

Tenders can be sent by email to Bea.Ennim@ngtuk.com
