# Gas mains replacement under way in Scunthorpe

## Work starts to replace Ashby Road gas main

30 Sep 2014

- **Pipe replaced as a precautionary measure**
- **Every effort to minimize disruption**

National Grid has started work on a 10-week project to install a new gas pipe in Kingsway (residential slip road running parallel to the A18 Kingsway) and Glanville Avenue, in Scunthorpe.

Work started yesterday (29 September) to install the new pipe, a tough, hardwearing plastic pipe that has a lifespan of at least 80 years and will continue to ensure safe and reliable gas supplies to west Scunthorpe for decades to come. To carry out the work safely it will be necessary to install temporary traffic lights in Kingsway while the project is under way.

A short section of Kingsway will also need to be closed for a week. During this period, there will be no access to Kingsway via the junction of Glanville Avenue and Lloyds Avenue. Instead, access to Kingsway will be via a signed diversion route.

The new pipe will replace an existing gas main in Ashby Road. This main is being replaced as a precautionary measure, following an incident in June. The cause of the incident is currently being investigated by the Health and Safety Executive.

National Grid authorising engineer Paul Martin said: "As a precautionary measure we are replacing the existing medium pressure gas main in Ashby Road with a brand new pipe. This pipe will ensure safe and reliable gas supplies to west Scunthorpe for many years to come. We would like to apologise for any inconvenience caused while we are carrying out our work. We will make every effort to minimize disruption and complete the project as soon as we can."

If anyone has any queries about the work they can contact customer services on 0800 0965678.

**Notes to Editors:**

National Grid has two contracted organisations carrying out gas mains replacement work on its behalf. They are: tRIIO, a partnership between Skanska and Morrison Utility Services, in North London, East Anglia and the East of England and Balfour Beatty in the West Midlands and North West.

National Grid is one of the largest investor-owned energy companies in the world. We own and manage the grids that connect people to the energy they need, from whatever the source. In Britain and the north-eastern states of the US we run systems that deliver gas and electricity to millions of people, businesses and communities.

In Britain, we run the gas and electricity systems that our society is built on, delivering gas and electricity across the country. In the North Eastern US, we connect more than seven million gas and electric customers to vital energy sources, essential for our modern lifestyles.

National Grid in the UK:

- ? We own the high-voltage electricity transmission network in England and Wales, operating it across Great Britain
- ? We own and operates the high pressure gas transmission system in Britain
- ? Our gas distribution business delivers gas to 11 million homes and businesses
- ? We also own a number of related businesses including LNG importation, land remediation and metering
- ? National Grid manages the National Gas Emergency Service free phone line on behalf of the industry – 0800 111 999 (all calls are recorded and may be monitored).
- ? Our portfolio of other businesses is mainly concerned with infrastructure provision and related services where we can exploit our core skills and assets to create value. These businesses operate in areas such as Metering, Grain LNG Import, Interconnectors and Property. National Grid Carbon Ltd is a wholly owned subsidiary of National Grid and it undertakes Carbon Capture Storage related activities on behalf of National Grid.

National Grid in the US:

- ? In the northeast US, we connect more than seven million gas and electric customers to vital energy sources, essential for our modern lifestyles.
- ? National Grid delivers electricity to approximately 3.3 million customers in Massachusetts, New York and Rhode Island.

It is the largest distributor of natural gas in northeastern U.S., serving approximately 3.4 million customers in New York, Massachusetts, and Rhode Island.

## Notes for editors

### Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

#### National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
