## Gas mains upgrade in the pipeline for Balby Road, Doncaster

Work is under way on a major project to keep gas supplies flowing to Doncaster for decades to come.

**17 Mar 2017**

National Grid is upgrading nearly 400 metres of ageing gas main in A630 Balby Road, Doncaster. The existing metal main is being replaced with a tough new plastic pipe that will last at least 80 years.

To keep staff and road-users safe, there will be a lane closure in Balby Road from Monday 27 March for six weeks. The lane closure will be in place from Greenfield Lane to Bainbridge Road and will affect traffic heading into Doncaster.

National Grid Authorising Engineer Paul Martin said: "We are investing in a gas mains upgrade that will secure safe and reliable gas supplies for local homes and businesses until the end of the century. This is a complex project but we are asking people to bear with us while we carry out this essential work.

"To keep our staff and road-users safe, we need to install a temporary lane closure. We are sorry for any inconvenience caused but it is important that we replace this pipe. Once the new plastic pipe is in the ground it will last for decades and require little or no maintenance."

For any enquiries about this work people should contact National Grid's customer services team on 0800 096 5678.

**Notes to Editors:**

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

**National Grid in the UK:**

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
  
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
