

Essential gas mains upgrade for Station Road, North Hykeham

Gas pipe upgrade starts on 27 July in Station Road and Hamilton Road

22 Jul 2015

- Work will secure local gas supplies for decades to come
- Temporary traffic lights in Station Road

Vital gas mains renewal work to keep gas flowing to homes and businesses North Hykeham, near Lincoln, will start on Monday (27 July) in Station Road and Hamilton Road.

National Grid will be replacing the existing iron gas mains with modern hardwearing plastic pipes that are designed to last for at least 80 years. The work is anticipated to take seven weeks.

To carry out the work safely, there will be temporary traffic lights in Station Road while the project is under way. The traffic lights will be manned during peak times to keep traffic flowing.

It may also be necessary for temporary traffic lights to be stationed at the junction of Newark Road and Station Road during some weekends and these will be agreed with the local authority, if required.

The bulk of the work has been timed to coincide with the school summer holidays to ease congestion on roads in the area.

National Grid Authorising Engineer Paul Martin said: "This work will secure safe and reliable gas supplies for local people until the end of the century.

"We will do everything we can to complete the project as quickly as possible and to minimise any inconvenience our work may cause. We greatly appreciate the co-operation and patience of the local community and motorists."

This work forms part of a project to upgrade a kilometre of gas mains in the Station Road area of North Hykeham. Gas mains renewal in St Hilary's Close is now complete and work in St David's Road is expected to finish next week.

If anyone has any queries about the work and how it will affect them they can contact customer services on 0800 096 5678.

Notes for editors

National Grid has two contracted organisations carrying out gas mains replacement work on its behalf. They are: tRiIO, a partnership between Skanska and Morrison Utility Services, in North London, East Anglia and the East of England and Balfour Beatty in the West Midlands and North West.

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
