Lane closures ahead: Vital work to be carried out off the A12 along the Essex/Suffolk border

Essential work to take place off one of East Anglia's major routes

07 Feb 2017

- **Near side lane, slip road and layby closures planned along the northbound side of the A12 between junction 29a and junction 30 near the Essex/Suffolk border**
- **Diversion route will be in place for the duration of the project**
- **Project will help ensure safe and reliable gas supplies for cooking and heating are maintained**

Motorists are being advised of major work that has been scheduled to be carried out along a section of one of East Anglia's major routes the A12.

Investigation and remediation work need to be carried out on a section of gas pipeline to help ensure the region keeps on enjoying safe and reliable gas supplies for cooking and heating.

The gas pipeline is located close to the slip road and due to the high speed of traffic leaving the A12 the following closures need to be implemented to enable the work to be carried out safely and efficiently.

- **Closure of a 900m stretch of the nearside lane of the A12 northbound at junction 29a between 9pm and 5am overnight between Sunday 2 April and Monday 3 April 2017 and 9pm on Friday 16 June and 5am on Saturday 17 June 2017.**
- **Closure of the laybys immediately before and after junction 29a during the above dates and times**

- Closure of the slip road off the northbound A12 at junction 29a between 5am on Monday 3 April and 5am on Friday 16 June 2017

The following diversion will be in place for the duration of the project:

Traffic leave A12 at junction 30 (Stratford St Mary) and follow diversion via Upper Street, The Street, Lower Street and Gun Hill.

Karl Shipp, Network Supervisor Gas Pipelines, East Anglia, National Grid Gas Distribution, said: "This essential project will help ensure the pipeline keeps on supplying safe and reliable gas supplies for cooking and heating to the region.

"In order to do the work safely we need to close the slip road, which will also mean we have to implement two overnight closures of the nearside northbound carriageway, to set up and take down the slip road closure."

He added: "We've planned this project in close discussion with the local authorities and are doing all we can to minimise any inconvenience such as carrying out the A12 closures at quiet overnight periods."

For more information on the work people can call 0845 835 1111 or email wecare@nationalgrid.com

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.

- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
