National Grid caring colleagues help cancer sufferers

Jewellery day puts sparkle into people's lives

01 Dec 2014

- **Staff bake-off is the icing on the cake**
- **And, you're never alone wearing a Onesie at work**

National Grid work mates have held a special fund raising day to help two terminally ill cancer patients.

They organised home-made cake and jewellery stalls to raise more than £720 for Dave Smith and Alex Hopwood.

For an extra £1 people could wear their pyjamas and onesies to work – but nothing too revealing.

And no one had time for sleeping on the job as the charity team took over the canteen for five hours with its stalls. The canteen agreed not to sell its own cakes to help boost sales.

And at the end of the day there was a cake auction – with some tasty home-made efforts quickly going under the hammer.

Tanya Upton, National Grid organiser said: "This was a magnificent effort to help people who have become close to us. Dave is a colleague and his wife Amanda also works for National Grid. We hope the money will enable this lovely family to spend as much time together as possible.

'It'll go into "Memory Making" where mum, dad and their two little girls will spend a memorable day.

'And we'll help Alex with her "Gift to Lift" charity. It's important that we care and share, and make an effort to help all those less fortunate than most of us. Both these families have been dealt a cruel hand. We do our best to give them treasured memories.'

Nursery nurse Alex is aged 24 and has leukaemia. She has recently been told that further treatment cannot help her.

She lives in Hinckley and is well known to the National Grid at its nearby headquarters. She looked after many of their children at her school.

During long spells in hospital she started up her "A Gift to Lift" charity. It sells hand-made jewellery.

Dave Smith is aged 35 and married with two young girls, Molly and Jessica. He worked for National Grid at Warwick. He was diagnosed with pancreatic cancer 18 months ago.

Despite a course of treatment in Germany the illness has returned.

Notes to Editors:

National Grid is one of the largest investor-owned energy companies in the world and has been named Responsible Business of the Year 2014 by Business in the Community. We own and manage the grids that connect people to the energy they need, from whatever the source. In Britain and the north-eastern states of the US we run systems that deliver gas and electricity to millions of people, businesses and communities.

In Britain, we run the gas and electricity systems that our society is built on, delivering gas and electricity across the country. In the North Eastern US, we connect more than seven million gas and electric customers to vital energy sources, essential for our modern lifestyles.

National Grid in the UK:

- We own the high-voltage electricity transmission network in England and Wales, operating it across Great Britain
- We own and operate the high pressure gas transmission system in Britain
- Our gas distribution business delivers gas to 10.9 million homes and businesses
- We also own a number of related businesses including LNG importation, land remediation and metering
- National Grid manages the National Gas Emergency Service free phone line on behalf of the industry - 0800 111 999 (all calls are recorded and may be monitored).
- Our portfolio of other businesses is mainly concerned with infrastructure provision and related services where we can exploit our core skills and assets to create value. These businesses operate in areas such as Metering, Grain LNG Import, Interconnectors and Property. National Grid Carbon Ltd is a wholly owned subsidiary of National Grid. It undertakes Carbon Capture Storage related activities on behalf of National Grid.

National Grid in the US:

- National Grid delivers electricity to approximately 3.4 million customers in New England and upstate New York
- We own 3.8 gigawatts of contracted electricity generation, providing power to over one million LIPA customers
- We are the largest distributor of natural gas in northeastern U.S., serving approximately 3.5 million customers in New York, Massachusetts and Rhode Island.

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
