## National Grid continues essential gas mains work in the heart of the City of London

? Work underway in Houndsditch from Outwich Street to Aldgate High Street until January 2015

14 Nov 2014

- **Goring Street and St Mary's Axe will remain closed until end of December 2014**
- **Minimal dig technology being used to reduce disruption**

National Grid is continuing its programme of gas mains replacement work in the City of London.

Engineers are replacing ageing metallic gas mains with new more durable pipes which will ensure the local community keep on enjoying safe and reliable gas supplies.

The latest phase of the work is currently underway in Houndsditch, from Outwich Street to Aldgate High Street and should be complete by the end of January 2015. During this time Goring Street and St Mary's Axe will remain closed. Some parking bays along Houndsditch will also be suspended, this will happen in phases commencing at Outwich Street moving along towards Aldgate.

Work has been coordinated with the City of London and Transport for London and the project has been brought forward to coincide with the Aldgate regeneration scheme to minimise disruption.

National Grid project engineer, Mick Morris, said: "Wherever possible we're using innovative technology to insert the new pipe into the old gas mains. This is much quicker and less disruptive than digging trenches to lay new mains.

"Throughout the work, all shops and business will be open as usual and our engineers will make every effort to deliver this essential work with minimal disruption."

The local community and surrounding businesses will be kept informed about the progress of the project.

The project is part of National Grid's essential gas mains replacement programme in the capital.

For more advice or information on the project call 0800 096 5678 or go to [www.roadworks.org](http://www.roadworks.org)

**Notes to Editors:**

National Grid is one of the largest investor-owned energy companies in the world and has been named Responsible Business of the Year 2014 by Business in the Community. We own and manage the grids that connect people to the energy they need, from whatever the source. In Britain and the north-eastern states of the US we run systems that deliver gas and electricity to millions of people, businesses and communities.

In Britain, we run the gas and electricity systems that our society is built on, delivering gas and electricity across the country. In the North Eastern US, we connect more than seven million gas and electric customers to vital energy sources, essential for our modern lifestyles.

**National Grid in the UK:**

- We own the high-voltage electricity transmission network in England and Wales, operating it across Great Britain
- We own and operate the high pressure gas transmission system in Britain
- Our gas distribution business delivers gas to 10.9 million homes and businesses
- We also own a number of related businesses including LNG importation, land remediation and metering
- National Grid manages the National Gas Emergency Service free phone line on behalf of the industry - 0800 111 999 (all calls are recorded and may be monitored).
- Our portfolio of other businesses is mainly concerned with infrastructure provision and related services where we can exploit our core skills and assets to create value. These businesses operate in areas such as Metering, Grain LNG Import, Interconnectors and Property. National Grid Carbon Ltd is a wholly owned subsidiary of National Grid. It undertakes Carbon Capture Storage related activities on behalf of National Grid.

**National Grid in the US:**

- National Grid delivers electricity to approximately 3.4 million customers in New England and upstate New York
- We own 3.8 gigawatts of contracted electricity generation, providing power to over one million LIPA customers
- We are the largest distributor of natural gas in northeastern U.S., serving approximately 3.5 million customers in New York, Massachusetts and Rhode Island.

Notes for editors

## Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

### National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
