

National Grid to take delivery of new kit at Pelham substation in Hertfordshire

New equipment to be delivered to make sure substation continues to work efficiently

19 Jan 2018

- **New equipment being delivered to Pelham substation**
- **Rolling road closures in place on Wednesday 24 January**
- **The new reactor is a vital investment to upgrade and enhance the efficiency of the electricity system**

A large delivery will be made to National Grid's substation in Stocking Pelham on **Wednesday 24 January 2018**.

The delivery, part of National Grid's work at the site, will bring equipment vital to the continued working of the substation.

The delivery will involve some rolling road closures as the vehicle carrying the equipment travels from the A10 along the A120 through Standon to Little Hadham before turning left and travelling up Albury Road through Patmore Heath and along Ginns Road into Stocking Pelham.

Bob Jones, project engineer for National Grid, said: "The delivery has been many months in the planning and we've worked hard to try and minimise any disruption deliveries of this kind can cause. The nature of the rolling road closures means that the vehicles will be continuously moving, albeit at a slow pace, so all being well the route along the A120, Albury Road and Ginns Road into Stocking Pelham won't be affected for too long.

"Once this delivery is complete, our work will continue to take place within the substation itself. We appreciate the cooperation and understanding of the local community during this work."

For further information regarding the delivery please contact National Grid's community relations team on 0800 389 7235

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
