Reminder for motorists in the Lincoln area to leave extra journey time

19 Aug 2016

National Grid is reminding motorists in the Bracebridge Heath area of Lincoln to leave extra time for their journeys now that a major gas mains upgrade has reached its final stages.

National Grid is renewing nearly 300 metres of gas mains in the A15 London Road. Work is due to be completed by 4 September.

To carry out the work safely temporary three-way traffic lights are now in place in London Road at the junction of Grantham Road.

Paul Martin, National Grid Authorising Engineer, said: "We're sorry for any inconvenience caused to motorists. We appreciate that this is a busy route. We've planned the project during the summer school holidays as there is less traffic on the roads. However, we would still advise motorists to leave extra time for their journeys, particularly at morning and evening peak times. We would like to thank people for their patience and co-operation."

For any enquiries about this work people should contact National Grid's customer services team on 0800 096 5678. To find out more about how National Grid replaces gas mains and how that affects residents and businesses go to www.bettergaspipes.co.uk

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
