- Tadcaster Temporary Construction Compounds
- LVIA study area

Zone of Theoretical Visibility

- Elements of the development may be visible

Note:
The ZTV has been modelled using Ordnance Survey Terrain 5 DTM data.

The ZTV model for the proposed development has been created using preliminary representative points modelled at a height of 15m with a receptor viewing height set at 1.5m.

Exclusion zones for woodland and buildings have been created using OS Vectormap District boundary data. Building exclusion zones have been modelled at an arbitrary height of 7.5m. Woodland exclusion zones have been modelled at an arbitrary height of 10m.
